DETAILED ACTION

Remarks

1. Claims 1-4 and 6 are pending in the application.
2. Final rejection is withdrawn.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Arthur J. Steiner (Reg. No. 26,106) on Feb. 2, 2004.

4. The application has been amended as follows:

In claim 1, at line 8, replace "the surface" with – a surface --; at line 10, replace "the hardened layer" with – the hardened **polyimide** layer --; at line 10, delete "step of" before "etching"; and at line 12, add – **said** – before "ashing" and delete "**process**" after "ashing."

In claim 4, at line 2, replace "in said step of removing, ashing process" with – **said ashing** --.

In claim 6, at line 2, delete "step of" before "curing."

Allowable Subject Matter

5. Claims 1-4 and 6 are allowed.
6. The following is an examiner's statement of reasons for allowance:

Art Unit: 2823

The closest prior art of record, Shinohara (US 6,127,099) teaches a method of manufacturing a semiconductor device comprising the steps of :

- forming an interconnection 14 on a semiconductor substrate 11/12 having a semiconductor element, such as a wiring element (not shown), formed thereon (Fig.2B);
- forming a passivation film 15 (Si_3N_4) on the semiconductor substrate 11/12 including the interconnection 14 (Fig.2C);
- forming a photosensitive polyimide film 16, which is served as a buffer coating film, on the passivation film 15 (Fig.2D);
- patterning the photosensitive polyimide film 16 (Fig. 2E);
- etching the passivation film 15, while the patterned photosensitive polyimide film 16 is taken as a mask (Fig. 2F and col. 3, lines 17-20);
- ashing the surface of the substrate 11/12 by an oxygen plasma (col. 3, lines 20-44);
- and
- curing the semiconductor substrate 11/12 after ashing by subjecting the substrate 11/12 to a heat treatment to convert the polyimide film 16 into imide (col.3, lines 23-25 and 38-40).

Shinohara neither teaches nor suggests that the *etching* forms a *hardened polyimide layer* on the *surface* of the polyimide film and the *ashing* removes *0.1 μm to several micrometers* of the polyimide film, thereby *removing the hardened polyimide layer* formed on the surface of the polyimide film.

Art Unit: 2823

The instant application is deemed to be directed to a nonobvious improvement over the invention patented in US 6,127,099. The improvement comprises etching which form a hardened polyimide layer on a surface of the polyimide layer and ashing to remove the hardened polyimide layer, which, in turn, would ensure the integrity of a result of the etching.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hsien-Ming Lee whose telephone number is 571-272-1863. The examiner can normally be reached on M-F (9:00 ~ 5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Olik Chaudhuri can be reached on 703-306-2794. The fax phone number for the organization where this application or proceeding is assigned is 703-305-3431.
